Banking & Enterprise

Enterprise Video Platform

Enterprise video is about more than just allowing your employees to watch TV and videos, it is about more than delivering that content securely, it is about more than access control; it is about delivering video wherever, whenever it is needed to the device the user wishes to access media from. An Enterprise Video Platform should deliver anywhere; the meeting room, home office or when travelling, to Smart TV, PC or mobile device. The only way to ensure Enterprise Video becomes an everyday tool is to ensure the consumption of the media is simple, effective and flexibly delivered.

Virtual Desktop Video

The final piece in the video streaming jigsaw; secure video and live TV delivery in virtualised environments is a challenge many have tried and failed at, with streaming quality so poor that video was unusable for practical business needs. Using our sophisticated streaming, encoding and decoding technologies, Tripleplay has solved this problem, delivering high quality, impacting video to virtual desktops and thin clients through our Media Video Player (MVP) desktop app. With incredible quality and the same feature set as local application deployments of the MVP, our virtual desktop solution is a world-class business tool.

Training & Compliance

Make sure your team have all of the training materials they need, being able to monitor their viewing of those materials and keeping your HR records fully up-to-date is a difficult task. The Tripleplay Enterprise Video solution, with both desktop and mobile applications, enables the delivery of all HR and compliance training to any employee, securely and with the capability to review playback statistics for every individual, delivered through a personalised, branded portal.

Town Hall Address

Ensuring all employees can partake in CEO and town hall addresses is a major driver behind the investment in enterprise video platforms, guaranteeing no employee is left out and creating a feeling of inclusion and involvement. Through Tripleplay's low latency HD Encoder, delivered to any IP enabled Mobile Phone, Tablet, PC, Laptop, Set Top Box, supported Smart TV or Digital Signage screen an enterprise video platform becomes more than just 'YouTube' for business, it also becomes your broadcasting platform, your own in-house TV channel.

Digital Signage & IPTV

Digital Signage and IPTV plays a part in the everyday experience of visiting a modern day business, welcoming visitors, communicating with staff and creating a modern ambiance that is befitting of a forward thinking and innovative business. Through Tripleplay's Digital Signage platform any business can aggregate control to those who need it, allowing them to alter only what they need to and ensuring business standards are met through full workflow management control. With single click, drag and drop upload and a fantastic visual editing system Tripleplay Digital Signage with integrated IPTV is the AV/IT solution of choice for many of the world's biggest banks and enterprises

We integrate with:

- SAML
- LDAP
- Active Directory
- AMX
- Crestron
- Microsoft Sharepoint
- Citrix
