

## Tripleplay Mobile Media

*Live streams, Live TV, VOD, Upload, Secure Download, Messaging, Chat*

Using Tripleplay streaming and IPTV technology, the Tripleplay Mobile Media Application (MMA) is an integrated platform for viewing, uploading, offline viewing and sharing of media content and comes complete with built-in messaging, forms and chat features.

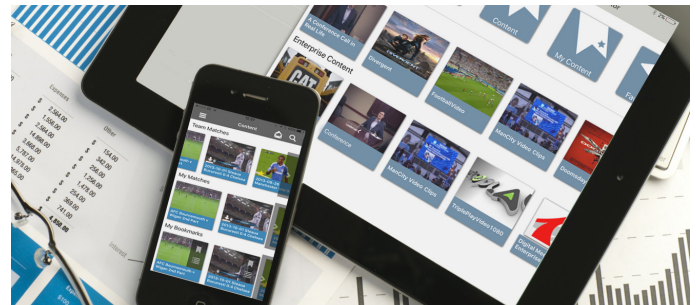

Through the Mobile Media App organisations can deliver camera streams, live TV, recorded video, audio and documentation to any mobile or tablet device using iOS and Android operating systems, whilst also enabling the secure, encrypted download of content for offline viewing.

Tripleplay MMA links to our single platform digital media solution, enhancing the experience of existing TripleTV IPTV, TripleStream Mobile Streaming and TripleVOD Video on Demand users, and is a complementary product to the TripleChoice Media Portal.

Once downloaded, the app is linked to your own Tripleplay digital media platform, is themed in your company or organisation branding, and will deliver your personal content, allowing your employees to view, securely, all live TV and streams that are already available via PC, STB or Smart TV.

Tripleplay MMA allows access to content whenever and wherever needed.

*Tripleplay's Mobile Media Application is a safe and secure, controlled, high quality media delivery and communications platform that can be integrated into any Tripleplay IPTV and Video Streaming environment.*

### Features

- Secure, encrypted download of media content for offline viewing
- Live streaming of TV, camera and VOD content
- Secure messaging and chat
- Feedback forms and questionnaire creation
- Media sharing
- Upload content from device, iCloud or record personal content in the app

Tripleplay MMA is a fantastic addition to any organisation's digital media service, creating a single interface for the access of content at any time, securely and completely controlled by your business.

# Mobile Media Application

## Features

### Live

Watch live TV, live lectures or live encoded streams directly on the app using our high quality HLS streaming technology.

### Content

Access recorded video, music, TV content and documentation through the app, providing a single, mobile point of access for media content.

### My Content

Upload content and record content directly into your own media library, providing a personalised experience for every user.

### Upload

Upload content to the app from iCloud, mobile device library or record content using the device's camera directly into your Mobile Media App library.

### Download

Securely download encrypted individual content items for offline viewing, ensuring the app is useful on and off network.

### Secure Messaging

Send secure messages from the app management system to all users, including links to videos, streams, music or documentation.

### Calendars

Create centralised calendars to allow the sharing of important events and activities.

### Forms

Create questionnaires and forms through the app management system to get feedback, to test or to quiz users.

### Chat

Communicate securely through the Mobile Media App to individuals or group using your personal account and servers.

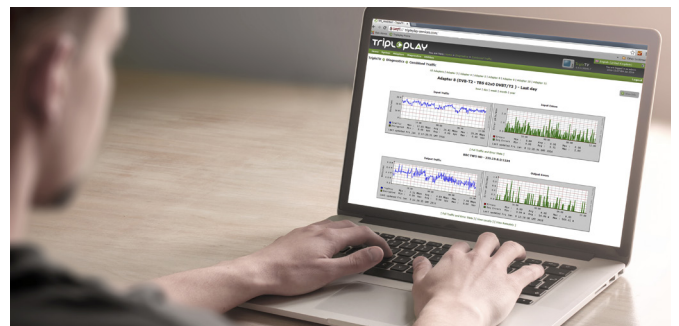

### Favourites

Favourite individual content items for quick and personalised access to media content via the homepage or menu.

## System Management

All features, items of content and users can be individually managed, monitored, restricted and controlled from our browser based management interface. The Tripleplay Mobile Media App is managed from the same interface as our other digital media solutions, providing a familiar feel to its operation, with our comprehensive control systems providing peace of mind that content will be accessed only by whom, when you wish, where you wish and for how long you wish.

## Download Details

The Tripleplay Mobile Media Application is available to download from the App Store and Google Play, however, it will only operate as part of a Tripleplay solution, requiring a link to a Tripleplay digital media platform and a valid site token.
